

### **Individual Screening Program**

### **Program Details**

The Empower Health Services Individual Screening Program allows you to identify health risks early and better understand your overall wellness. You have the option to complete your screening at a local lab.

#### Your Screening Package Includes:

- **Panel C** Testing that consists of a 37-component blood chemistry profile. In addition to identifying signs of heart disease and diabetes, Panel C tests for liver and kidney malfunction, and thyroid, blood, and nutrition disorders.
- **Reflex to Hemoglobin A1c** Assesses blood sugar levels over the past 90 to 120 days. This test can help diagnose type 2 diabetes and prediabetes and will run automatically if a glucose result is over 99 mg/dL.
- Self-Reported Blood Pressure Evaluation Please provide your most recent blood pressure reading during the online registration process. Blood pressure is expressed by a systolic (top number) and diastolic (bottom number) measurement. (Example: 120/80; 120 = systolic and 80 = diastolic)
- · Self-Reported Height and Weight
- Empower Health Assessment™
- · One year of unlimited access to our user portal, designed to help you understand and grow your health.
- Results are confidentially and securely available online at <u>mycbs.org/health</u> within 2-3 business days of your lab visit (pending additional tests ordered).
- Optional Additional Tests Additional blood tests can be selected during the online registration process. For a full overview of tests and fees, please see the Additional Tests Menu. This testing will not take extra time to complete.
- **Prostate Specific Antigen (PSA)** Screens for signs of prostate cancer in men. (Available at no cost for those on CBEBT plan; self-pay option available for others)

ELIGIBLE	SCREENING FEES	<b>PSA FEES</b>	ADDITIONAL
PARTICIPANTS	(Panel C & A1c)	(Men Only)	TEST FEES

Trust Medical Plan	CBEBT Medical Plan		for tests & fees

REGISTRATION DEADLINE IS <u>05/01/24</u>
SCREENING DEADLINE IS <u>05/31/24</u>

# Follow These Steps To Participate

#### 1. Log into the Christian Brothers Services 'My Health' site at mycbs.org/health

- a. Click "My Wellness" on the left
- b. Select Empower Health Services on the My Wellness page
- c. Click Empower Health Services on the Member Dashboard

  New to the Christian Brothers site? Go to <a href="mayer-mycbs.org/health">mycbs.org/health</a> and click "Activate/Register"

#### 2. Register for the Visit A Lab Program by <u>05/01/24</u>

- a. On the Empower Health Services portal, click "Register" and select "Individual Program" to complete registration.
- b. If payment is required, an EHS Customer Support Team Member will be in touch to collect credit card information. All payments must be made before you visit the lab.

#### 3. Await your LabCorp confirmation email

Once the registration steps are complete, you will receive a confirmation email containing next steps. You must wait until you receive this email before visiting the lab.

#### 4. Visit the lab by <u>05/31/24</u>

- a. Your confirmation email will include your COR order number. <u>Please bring this number</u> to your appointment.
- b. We recommend <u>printing your LabCorp Requisition</u> to bring to the lab. You can access your requisition and lab information through your personal empower.health portal.

#### 5. After your visit to the lab:

You can expect to receive an email letting you know that your screening results are ready to view online approximately 2-3 business days from your lab visit (pending additional tests ordered).

Please contact EHS with questions about participating in the EHS Individual Program:

Phone: 866.367.6974

• Email: individualprogram@empowerhealthservices.com

## **Additional Tests**

common allergens include Alternaria tenuis (mold), English plantain, Kentucky bluegrass, Bermuda grass, short r	naweed cak
m, dust mites, and cats and dogs. This panel tests your body's sensitivities to these substances. Those who have ny radioactive scans or treatment in the past week should avoid this test.	
Blood Type (ABO & Rh Factor)	
nis test determines your blood type: A, B, AB, or O. Since not every blood type (A, B, AB, or O) is compatible with th nowing your type is useful for donating blood or in the instance of transfusion or transplant.	e other,
Female Hormone Profile women's health	
The hormones tested in this screening are follicle-stimulating hormone (FSH) and luteinizing hormone (LH). Testing an help identify menstrual irregularities or menopause, and LH can help determine fertility issues. Several factors abnormal test results, including medications, estrogen, progesterone, and if you are menstruating.	ng FSH levels s can cause
H. Pylori (Helicobacter Pylori)	
This test identifies the presence of the H. Pylori bacteria, linked to digestive issues, gastritis, and ulcers. Some peop won't notice any symptoms of infection, while others experience a variety of digestive disorders.	ole with H. Pylor
High-Sensitivity C-Reactive Protein (hsCRP)	
The hsCRP is used to predict and assess your risk of heart disease or stroke. Note: CRP levels can be affected by c medications such as nonsteroidal anti-inflammatory drugs (e.g. ibuprofen, Aspirin) and estrogens (hormone the control pills).	ertain erapy, birth
Homocysteine heart health	
lomocysteine is an amino acid in our bodies that can be measured through a blood test. High levels of this amin nked to an increased risk of heart attack or stroke.	o acid are
Inflammatory Joint Disease	
This panel tests levels of RF Factor, C-Reactive Protein, Uric Acid, and ANA. Testing these together can help diagnos diseases like rheumatoid arthritis and lupus, as well as gout.	se autoimmune
and reput, and the state of the reput, do well do gode.	4: - i 4 -
