XpressIT Website Update Xpress

Maintaining a website can be a time-consuming and costly endeavor for any organization. Our Website Update Xpress is a customizable, hosted Content Management System (CMS) that allows you to easily maintain the content of your website using any current web browser, with no need for third party software.

Our CMS allows you to easily:

- Add, edit and maintain content on your website
- Easily publish changes
- Create new pages
- Add sub-menu items to the main menu items
- Add, organize and maintain photos and files
- Create links
- Distribute information prior to the next board meeting

For Catholic Parishes, Christian Brothers Services developed the **XpressIT Website Update Xpress Parish Place**, a self-managed “website in a box” online service tool that allows parishes to create their own website. The Parish Place CMS offers administrators a design view with no coding necessary, and easy-to-use tools, allowing for uploading new or revised web page contents with one click of the Publish button. Website visitors see a responsive frontend display built for modern web browsers and consistent with the device used, including mobile devices. www.ParishPlace.com

To communicate with your Board and Committees, we offer the **Xpress IT Board Portal Xpress**. The Board portal is a web-based hosted solution that makes board and committee communication easy, efficient and secure, providing directors and committee members instant, secure, 24-hour access to all important documents and materials. Information in the portal is conveniently organized on a dashboard that displays recent updates and activities.

XpressIT IT Operations Support

We are a private enterprise cloud service provider, which means we can help you to relocate your on-premises hardware and software from your data center to ours to gain benefits.

Relocating your data center into the CBS data center has the potential to provide your organization with many benefits, including the reduction of your overall IT burden in terms of time and dollars. It also provides a secure backup and disaster recovery system if needed.

We offer:

- **Virtual Windows Desktop** — Access your MS Windows desktop and your data via any web browser on any computer or device, safely and securely, including data backups and compliance activities, if needed.
- **Private clouds** — Offers all the benefits of a secure, single-tenant compute with dedicated or multi-tenant storage resources. Plus, it's built using security standards in compliance with HIPAA and PCI regulations.
- **Disaster Recovery as a Service (DRaaS)** — Your primary production environment will be continuously replicated to a US Signal cloud environment or between two US Signal virtual data centers. When needed, you can deploy a fully replicated instance of your environment with just the click of a button.
- **Backup as a Service (BaaS)** — Allows you to back up your data from any physical or virtual infrastructure or Windows workstation to the US Signal Cloud, access it any time, and restore it to anywhere via the Internet and outgoing TCP ports.

As we continue to adapt to this ever-changing, IT world, our team of information technology professionals, website developers, graphic artists, operations specialists and software developers are here to provide you with solutions to meet your needs.

“As soon as we engaged your website services team to operate our website they quickly got to work and developed our current website using the input we submitted. I feel you quickly entered into our charism and created a website more in keeping with Presentation charism than we could have, even if we had the technical expertise.”

Sister Katherine Fennell
*Union of Sisters of the Presentation of the
Blessed Virgin Mary*

“CBS created a secure website portal for our members to login to view property/casualty data from our back-office system and to submit transactions based on our requirements. This has greatly improved customer service while reducing our transaction processing costs.”

Conor O'Callaghan
*Executive Director, Canadian Religious
Administrative Services, Inc.*
