

Christian Brothers Services Communications and Mobility Review Service *with Eclipse Telecom, Inc.*

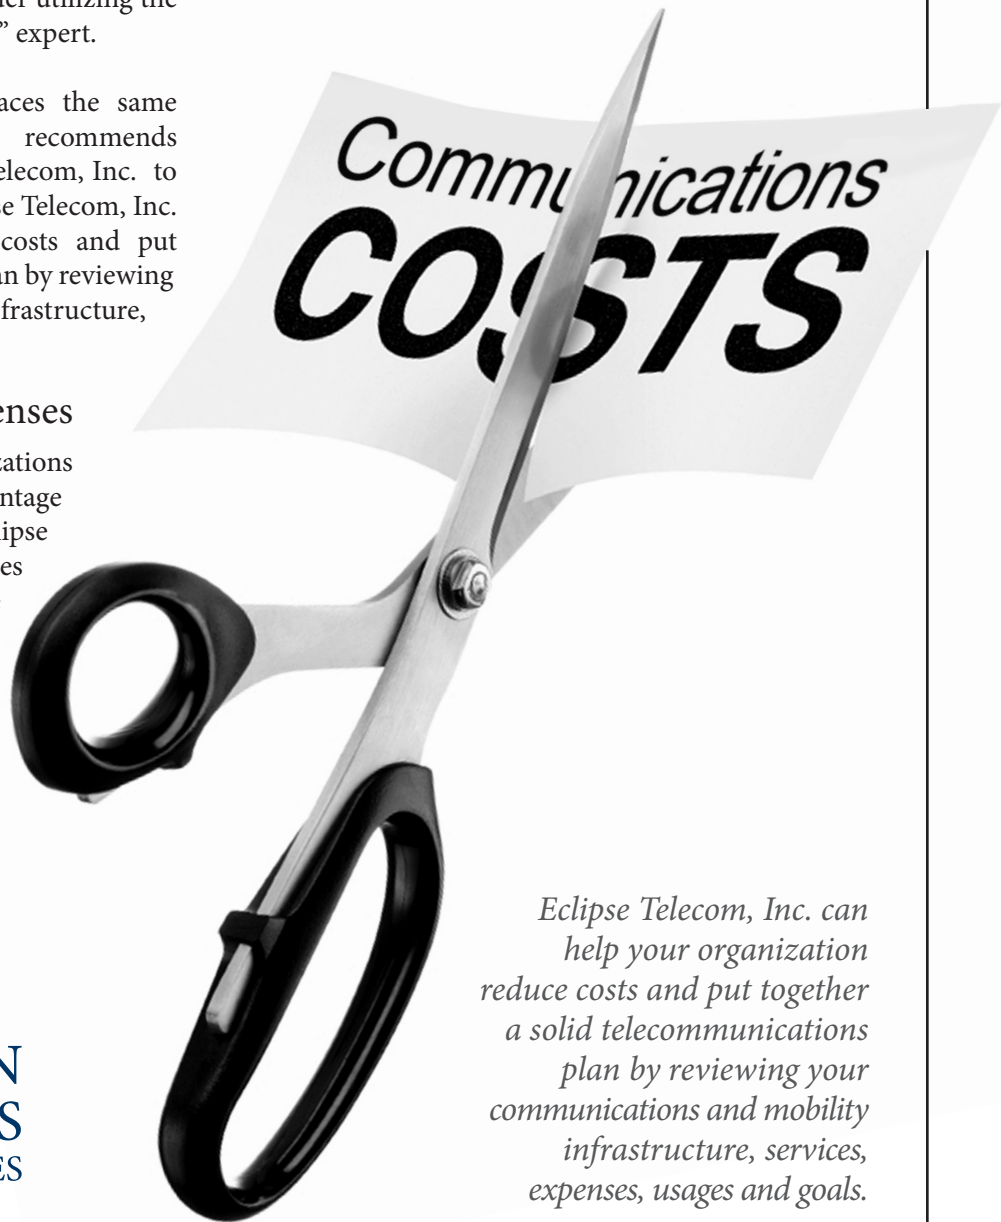

Are your communications and mobility infrastructure, services and agreements aligned with your actual usage and overall communications goals? Don't let deciphering telephone and Internet service provider invoices and government tariffs and rules become a challenging task that takes up all your free time – consider utilizing the services of a telecommunications “telco” expert.

Christian Brothers Services (CBS) faces the same challenges as your company, and recommends professional service provider Eclipse Telecom, Inc. to help you navigate the telco maze. Eclipse Telecom, Inc. can help your organization reduce costs and put together a solid telecommunications plan by reviewing your communications and mobility infrastructure, services, expenses, usages and goals.

Reduce Your Operating Expenses

Eclipse understands nonprofit organizations like yours, and can use that to your advantage with providers. With this service, Eclipse will only invoice you for their services (50% of first year savings) if they are able to create savings for you by reducing your actual expenses. If they are unable to reduce your expenses, you pay nothing. When they do reduce your expenses, you begin saving money immediately in the first year, and even more in subsequent years.

Not only can Eclipse provide one-time assistance, they can provide complete Telecom Lifecycle Management on an on-going basis to ensure your infrastructure, services and expenses continually stay in alignment with your organizational goals.

Eclipse Telecom, Inc. can help your organization reduce costs and put together a solid telecommunications plan by reviewing your communications and mobility infrastructure, services, expenses, usages and goals.
